

Privacy Statement

Who is Nevolve?

Nevolve Ltd are a software and website development company located at 4, Pryors Green, Bognor Regis, West Sussex PO21 4LR

We specialise in artificial intelligence solutions and also provide general development on a number of platforms. To contact us email us at info@nevolve.com

What information does Nevolve store?

Nevolve stores some information to help identify the user and also track their usage across our site.

Nevolve stores users personal details including names and emails and we track users across our site using their IP address which is used to help improve the site's design and user experience.

How does Nevolve collect this information?

Nevolve collects information by using Ajax to report back what users do on our site. We also track details saved on our systems.

What is an IP address?

Number that uniquely identifies each computer on the Internet. A computer's IP address may be permanently assigned or supplied each time that it connects to the Internet by an Internet service provider. An IP address has the format xxx.xxx.xxx.xxx.

What is Ajax (Asynchronous Javascript And Xml)?

Using an enhancement in JavaScript that allows Web pages to be more interactive and behave like local applications, which are also known as "rich client" applications. AJAX allows the Web page to retrieve small amounts of data from the server without reloading the entire page.

Prior to AJAX, any retrieval of data from the server required that the entire Web page be refreshed in the user's computer. As a result, systems were often designed with less interaction; for example, to have the user submit a form only at the end, after all fields were filled in. In contrast, AJAX systems can validate one or two items at a time "behind the scenes" without making the session cumbersome, especially over slow connections. AJAX, also known as "remote scripting," allows Web-based applications to be designed like LAN-based applications.

Why does Nevolve store this information?

Nevolve store this information to help provided a better service to our customers and to help maintain a secure environment for our customers to enjoy. We generate reports on this information to see what parts of the site users are using and whether our website is working as expected (or whether we need to change it).

Nevolve may use some of the information stored for sales and marketing purposes but this is only to screen out products and services that users will not be interested in.

Who has access to this information?

Only Nevolve Ltd has access to website usage and route details. All information that is store by Nevolve is only used in the UK and is not sold or given to any other groups other than which we are legally required to by English & Welsh Law.

How does Nevolve secure this information?

Nevolve secure users logins using 128bit SSL encryption which is standard throughout the internet. We also encrypt sensitive information on our servers to help protect it.

How can I obtain the information store about me?

Simply email us at info@nevolve.com or write to us requesting this information. There will be a charge of £10 for this service.
